

# Upgrade older Shader versions

Hello my friends,

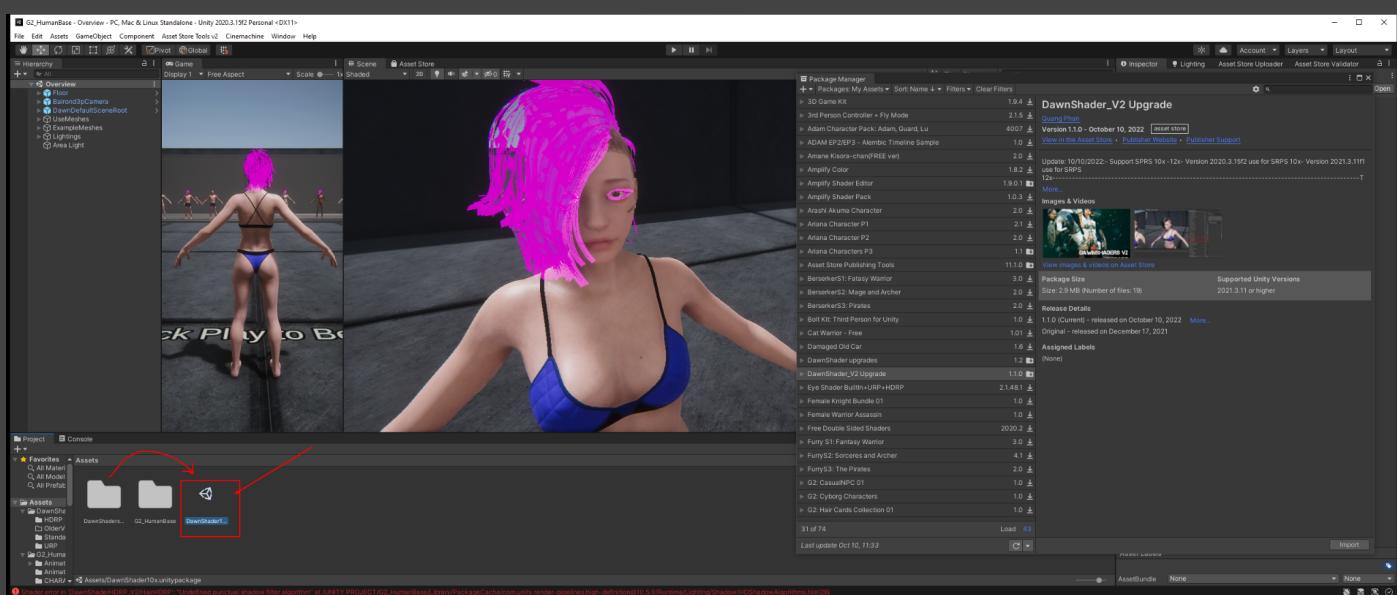

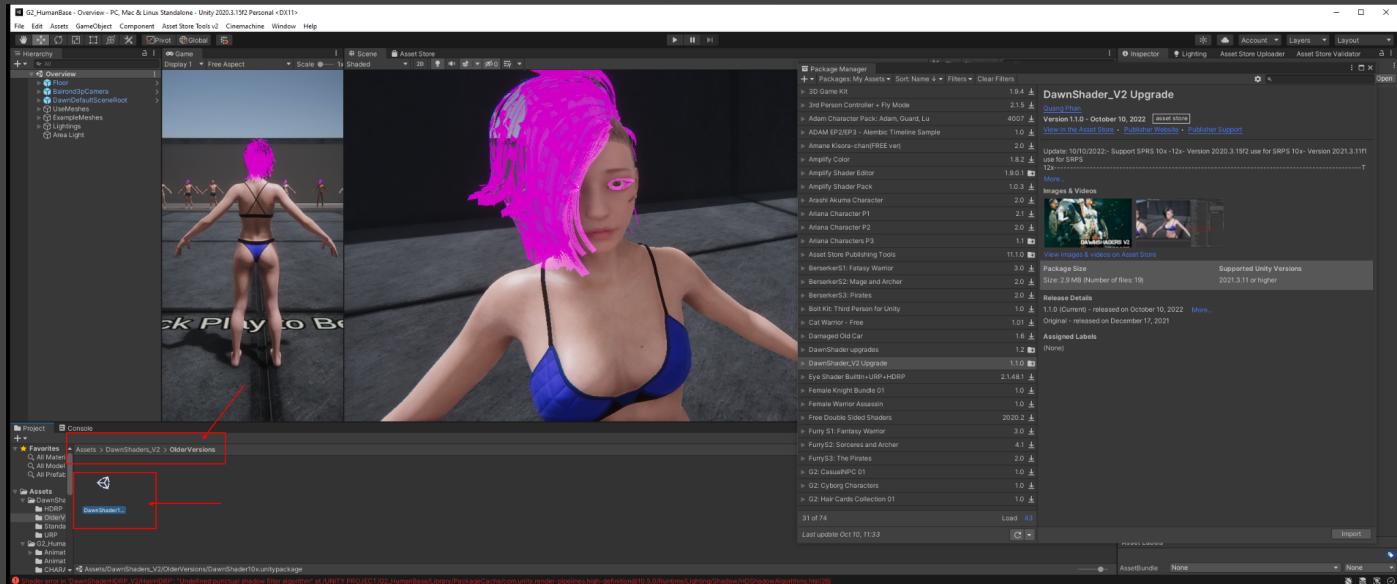

Because on my submitting page can't separate versions of this package to supporting multiple SRPS of Unity versions so I can only submit lastest shader version and I must archive older version under .unitypackage.

So to use older shader .unitypackage you need following:

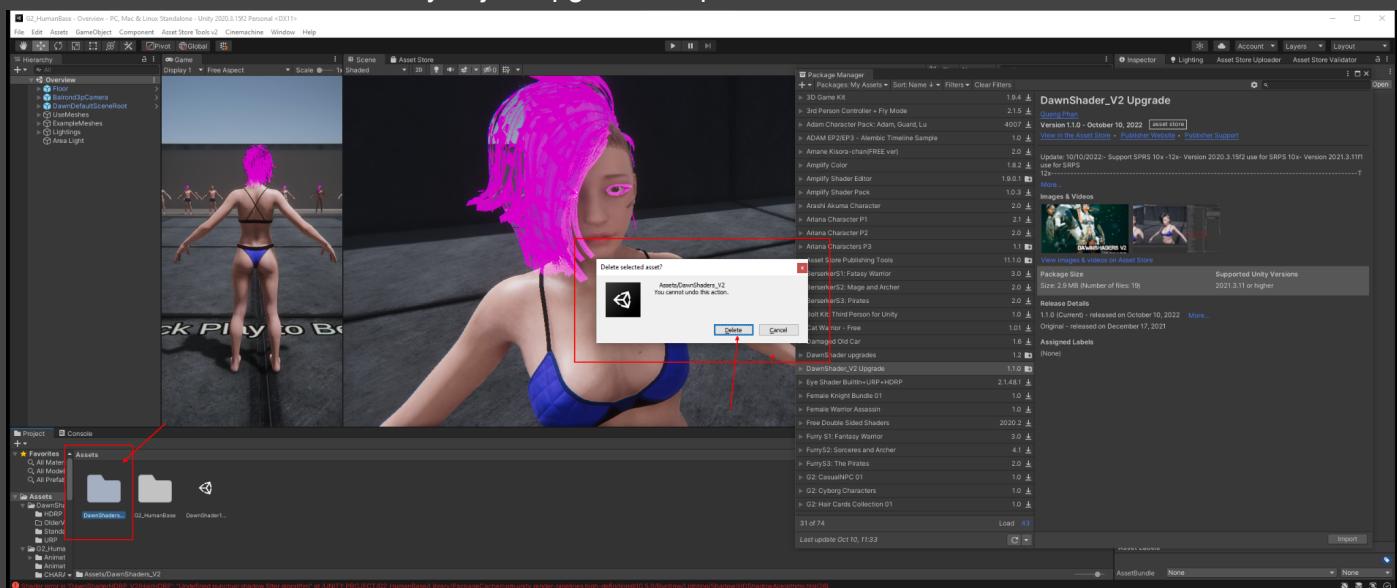

## 1. Import DawnShader upgrade as normally

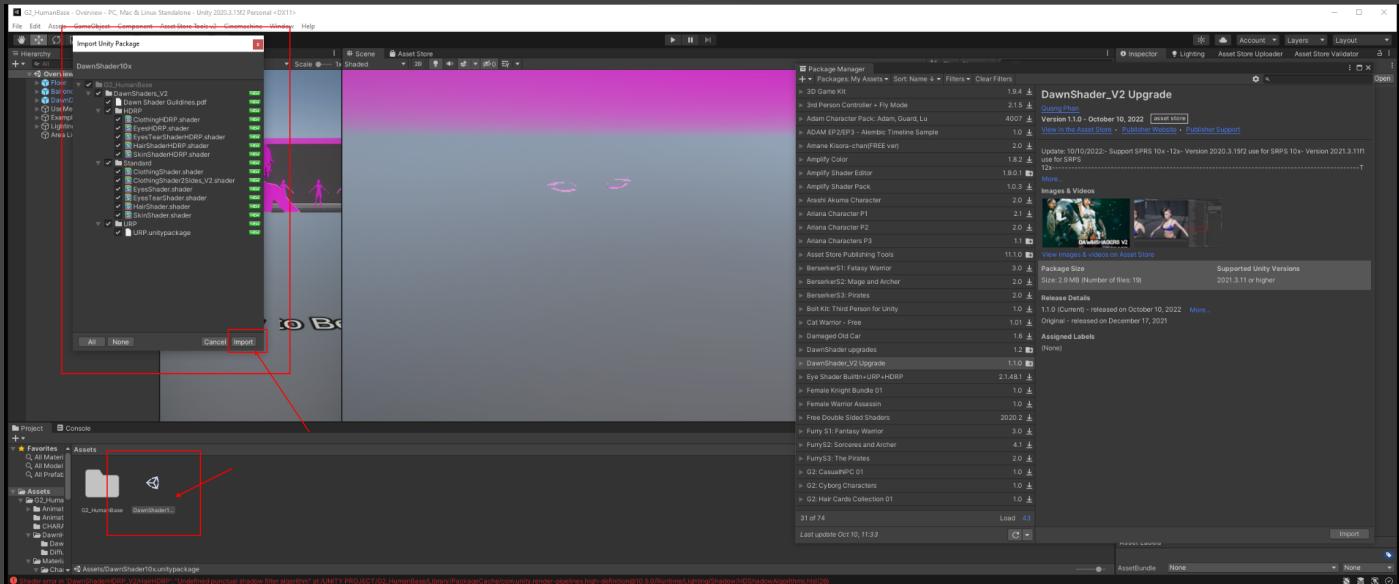

## 2. Move "DawnshaderXXX.unitypackage" file in OlderVersions to YourProject/Assets

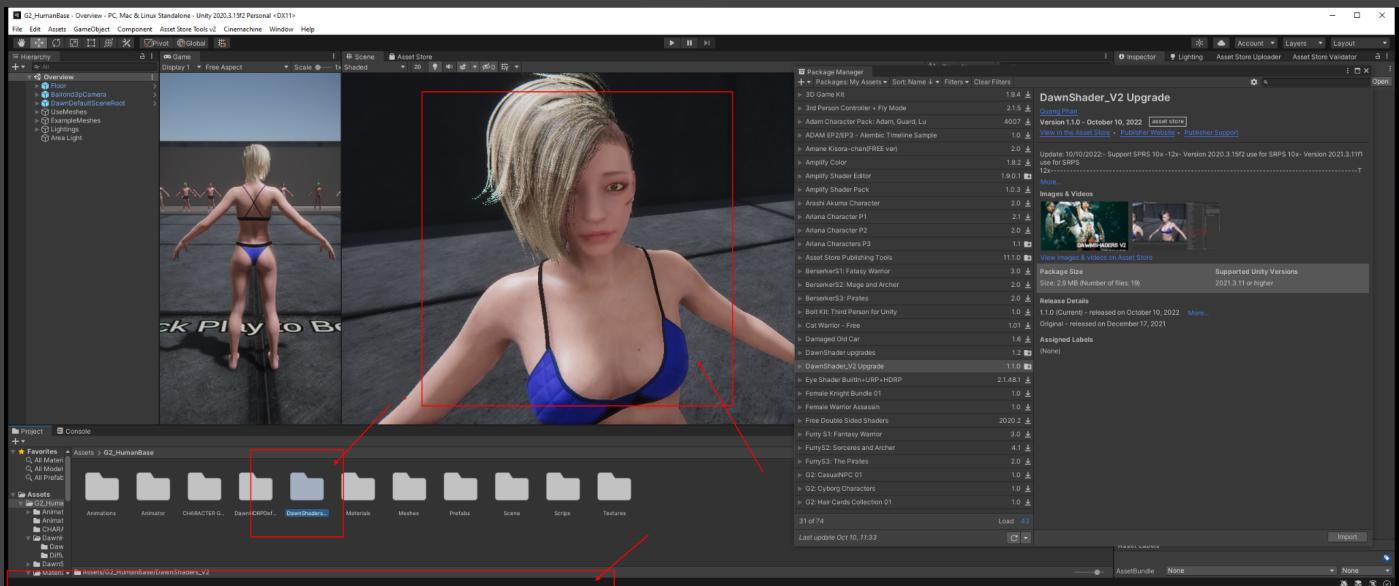

## 3. Delete DawnShader folder you just upgraded/Imported

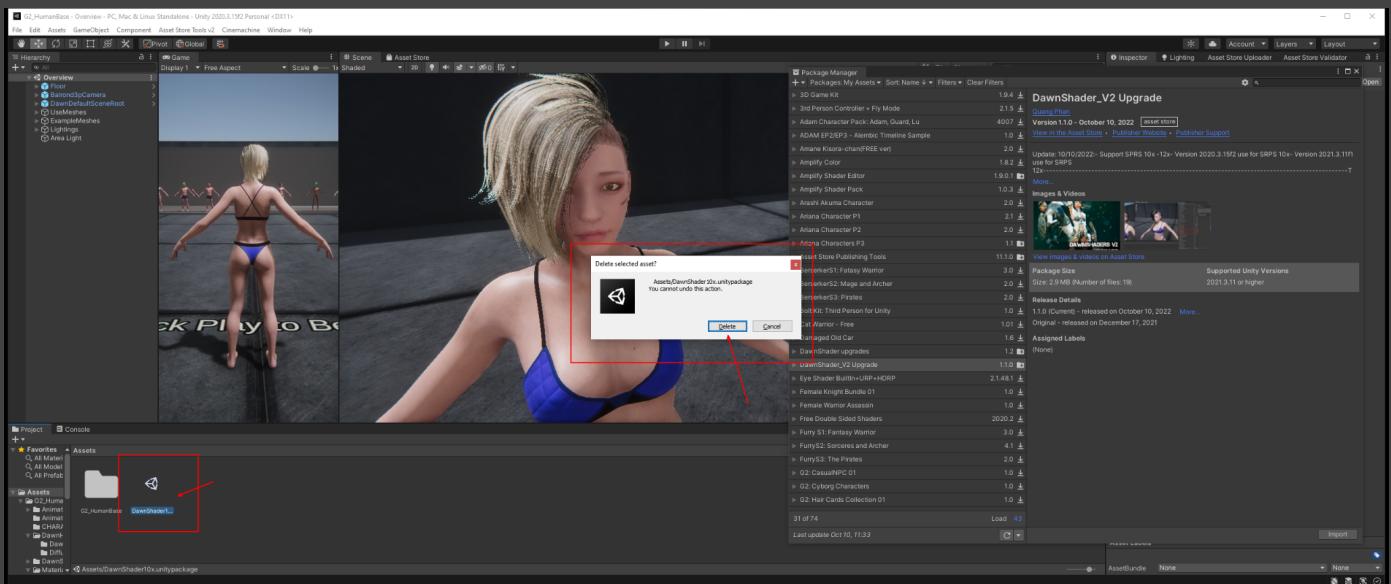

#### 4. Double click on "DawnshaderXXX.unitypackage" to import shader

#### 5. New "Shader" folder will import to YourProject/Assets and they will auto fill materials.

#### 6. Delete "DawnshaderXXX.unitypackage" in YourProject/Assets and Done!

Thank you for supporting me, if you have any questions, feel free to contact me: <https://discord.gq/BpwdQnm>
